

# CLAYTON

Deluxe models feature a Safety Drying Gun to dry the brakes and backing plate once they are clean—no more waiting for water-based cleaner to dry before the shoes and backing plate can be lubricated. The drain spigot makes it fast and easy to empty the tank when changing the solution. Deluxe models come with a parts cleaning tray to contain small parts and keep them from falling into the filter.

Our most popular model. The BCE-500's large basin provides plenty of room to work while its deep-drafted design keeps solution from splashing out. When sold in the US, the BCE-500 is equipped with a secondary filter called an "ULTRA" filter that captures particles as small as 5 micron in size. The BCE-500 is equipped with a standard Injector Nozzle for flushing drums prior to their removal. The basin measures 26" X 20 1/4" X 7" (660 mm X 514 mm X 178mm). The rectangular dolly provides storage for the cover when it is not in use.

## Have You Replaced Your Filters?

CLA300-003	Filters
CLA300-043	4 mm Bags
CLA300-361	Fluid
BIRB302	Filters
BIRB203	Fluid

The BB-2000 has a round dolly and a deep, round basin. This model has a Pinpoint Injector Nozzle with a tapered tip that fits into the brake adjustment slot. The Pinpoint Nozzle delivers a fine stream of cleaning solution into the brake drum to suppress brake dust prior to drum removal. The basin measures 22 3/4" diameter X 8 1/4" deep (580 mm X 210 mm).

The PW-200 is a lightweight, easy-to-handle parts washer that can be used on a bench top or easily carried to the work area. It contains a single Flow-Thru brush for cleaning and, like all of our models, is powered by a compressed-air-driven pump. The basin is identical to the BCE-200. It measures 25 1/4" X 18" X 8" (640 mm X 460 mm X 200 mm) and has a capacity of 3 1/2 gallons (13 liters).

Part Number PW-200XDS consists of PW-200 with 6 filters and 4 liters of T-N-T Plus™.
